Solution

Case Study: Infrastructure Consulting

Situation

- Client was running multiple applications on different set of servers and was facing issues in managing these servers .
- The servers were under utilized and due to limited space availability in the data center, client was facing issues in adding new servers for additional applications

Solution

 Created the virtualized environment for these servers resulted in huge costs savings in space, power and airconditioning. It has also improved the manageability and resource (Manpower and hardware) utilization to a great extent.
